

# WHY SOLAR MAKES SENSE

MyTexasSolar.com | 1-877-861-3061 | MyLouisianaSolar.com

## 30% Tax Credit • Rebates & Incentives

*APS's Continued Commitment to Providing Renewable Energy.*

In recent years, the price of energy has risen sharply and without warning. What better reason for you to take the steps toward your energy independence by becoming your own energy provider. With solar energy, you can protect yourself against the rising price of fossil fuel generated energy. You will never be charged for using sunlight!

There has never been a better time to go solar and take advantage of generous tax credits and rebates. When combined, these incentives greatly reduce the cost of your solar system. In addition, a study by the *National Appraisal Institute* states that every \$1,000 in annual energy savings adds \$20,000 of non-taxable value to your home.

A well designed solar-electric system offers guaranteed economic returns. With the price of electricity increasing every year, the value of your solar energy system only appreciates, providing you with reliable electricity at a low fixed cost. And once the system has paid for itself, you will enjoy FREE electricity for as long as the sun shines on your home.

Solar panels were originally designed for use in space, where conditions are extreme and maintenance is difficult. Our solar panels are warranted to produce electricity for 25 years, but will continue to produce energy up to 40+ years with little or no maintenance.

So why pay someone else for your electricity? Install a solar energy system on your roof today and see how harnessing the power of the sun can benefit you. Take the next step and call *Alternative Power Solutions* today at 1-877-861-3061 for a no-obligation quote and see how you can save with solar.

5.4 kW PV - Spring, TX

5.2 kW PV - Conroe, TX

*This Alternative Power Solutions Solar PV Electric System will save a Conroe family an estimated \$90,000 dollars over its lifetime. Solar currently reduces their electric bills by 76% each month. They were able to get 60% of the system's cost back immediately, thanks to federal and utility incentives.*

# ***THE APS DIFFERENCE***

From Consultation to Installation, APS Is Your Most Experienced Professional Provider for Solar Solutions.

You will experience the APS difference from your first contact with our solar consultant to the final walkthrough inspection with our certified technician. At APS, we understand that nothing is more valuable or important to you than your home. That is why we have assembled the best team of certified designers, engineers and technicians with experience in the solar and renewable energy industries.

Each member of APS works together to ensure the highest level of customer service and quality throughout every step of the process. From start to finish, we make your selection of APS and the installation of your solar electric system an enjoyable and exciting experience.

You can be confident in your decision to select APS for your project because we offer an unprecedented 5-year labor warranty on every installation. Furthermore, our technicians use only the best in time-tested solar equipment that carries a fully transferable 25-year warranty.

Our record of impeccable service is visible in homes and businesses throughout the Gulf Coast Region. Just ask our growing family of satisfied customers. When you choose APS, you are selecting the most experienced solar company in the business.

## **The APS Process**

- \* A friendly APS solar consultant will meet with you to design a system that suits your needs and budget.
- \* APS will prepare an informative quote package that outlines the costs and savings of your proposed system.
- \* APS will engineer, design and provide all permits, providing a smooth and worry-free experience.
- \* APS installation technicians will arrive on schedule and install the system in a timely manner.
- \* An APS engineer will power up the system for you and explain how you can monitor its production.
- \* Your technician will take you on a walkthrough inspection, with a quality checklist to ensure your complete satisfaction.

## **Benefits of Solar Power**

- \* **Increases your home's property value without an increase in tax liability**
- \* **Increases your home's resale value**
- \* **Protects your family's budget from the future of rising energy costs**
- \* **Produces an instant and guaranteed long-term return on investment**
- \* **Reduces attic temperatures and thus the radiant heat entering your home**
- \* **Excess energy produced and sent back to the grid will generate energy credits which will reduce your electric bill**
- \* **Solar panels will produce electricity for over 30 years**
- \* **30% Federal Tax Credit**

2.3 kW PV - San Antonio, TX
